

The laser allows excising quickly and effectively benign pigmental disturbances of various origin: brown ageing spots, solar spots on hands, face and body, and also spots which appeared due to inflammations and infections (nevus OTA, pigmentary hair nevus, coffee and milk spots).

Indications

Benign brownish spots on face and body

Benign pigmentations of various origin

Nevuses

Method of Treatment

Undesirable spots on face and body are transilluminated with pigmentational laser in regular intervals. The method is simple and fast, without a risk of scars formation. There is no need in anesthesia and discontinuing of every-day activities.

Program

1 session is enough except for special cases of nevus

Results

Disappearance of nevuses pigmentosus

Improvement of skin quality
